

**An Internship Report**  
Of  
**Deloitte Cyber Job Simulation**

Submitted  
To  
**School of Computer Science and Engineering**  
**IILM University, Greater Noida, U.P.**

In partial fulfilment of the requirement of degree of  
**B.Tech (Computer Science and Engineering)**

By  
Roll Number of Student: 2410031096  
**Name of Student: SHIVANI S**  
Programme: B.Tech (Computer Science and Engineering)

## **CANDIDATE'S DECLARATION**

I, Shivani S, do hereby declare that the internship report titled “Deloitte Cyber Job Simulation” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own and has not been submitted to any other institute for any degree/diploma requirement, and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature:-

Student Name: SHIVANI S

Roll No.: 2410031096

## **ACKNOWLEDGEMENT**

I am using this opportunity to express my gratitude to everyone who supported me throughout this job simulation. I am thankful for their aspiring guidance, invaluable constructive material and structured learning resources during this work.

I would like to thank Deloitte and the Forage platform for providing me the opportunity and the structured virtual environment to learn and gain practical exposure in the domain of Cyber Security. I am also thankful to my institute, IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement.

I express my gratitude to my parents for their blessings.

Signature:-

Student Name: SHIVANI S

Roll No.: 2410031096

## TABLE OF CONTENTS

|                                                              |    |
|--------------------------------------------------------------|----|
| 1. Candidate's Declaration .....                             | i  |
| 2. Acknowledgement .....                                     | ii |
| 3. Internship Completion Certificate .....                   | -  |
| 4. Project Description .....                                 | 1  |
| 4.1 Introduction .....                                       | 1  |
| 4.2 Organization Profile .....                               | 2  |
| 4.3 Problem Statement .....                                  | 3  |
| 4.4 Project Objectives .....                                 | 3  |
| 4.5 Scope of the Project .....                               | 4  |
| 4.6 Technologies and Tools Used .....                        | 4  |
| 4.7 Investigation Workflow .....                             | 5  |
| 4.8 Methodology .....                                        | 6  |

| 5. Bibliography/References .....                             | 9  |

### 3. INTERNSHIP COMPLETION CERTIFICATE

**Deloitte.**

## **Shivani S** **Cyber Job Simulation**

Certificate of Completion  
August 18th, 2026

Over the period of August 2026, Shivani S has completed practical tasks in:

Cyber security

**Tina McCreery**  
Chief Human  
Resources Officer,  
Deloitte

Enrolment Verification Code 6a84a2c1e0a44a9b24b3767a | User Verification Code 6a84a17c912fe6a8b876f2e7 | Issued by **Forage**

## 4. PROJECT DESCRIPTION

### 4.1 Introduction

This report presents a detailed account of the Deloitte Cyber Job Simulation undertaken through the Forage virtual experience platform, in the domain of “Cyber Security.” The simulation was completed in August 2026 as part of the requirement of the Bachelor of Technology (Computer Science and Engineering) programme at IILM University, Greater Noida. The primary aim of this simulation was to build a practical understanding of the day-to-day responsibilities of a Cybersecurity Analyst at Deloitte, with a focus on investigating a simulated security incident through log analysis, tracing suspicious network activity, and communicating findings to stakeholders.

The simulation followed a self-paced, task-based structure combining a realistic client scenario with guided videos and example answers from Deloitte professionals. On successful completion of all required tasks, a Certificate of Completion was issued jointly by Deloitte and Forage, confirming that practical tasks in Cyber Security had been completed.

### 4.2 Organization Profile

Deloitte is one of the world's largest professional services networks, providing audit, consulting, financial advisory, risk advisory, tax, and cybersecurity services to clients across industries. Deloitte's Cyber practice helps organizations anticipate, withstand, and recover from cyber incidents by combining threat intelligence, forensic investigation, and risk-advisory expertise.

Forage is a virtual work-experience platform that partners with leading global companies, including Deloitte, to design job simulations that let students practise real workplace tasks in a risk-free, self-paced environment. Each simulation is guided by pre-recorded videos and example answers prepared by professionals from the partner organization, allowing participants to build job-relevant skills and earn a verifiable certificate of completion.

### 4.3 Problem Statement

Many engineering students study the theoretical foundations of cybersecurity — such as network security, log analysis, and incident response — during their academic coursework, but very few get structured, hands-on exposure to investigating a realistic security incident the way a professional analyst would. Concepts such as log correlation, baseline behaviour analysis, and distinguishing internal from external threats are often understood only at a theoretical level. The problem addressed by this job simulation was to practically step into the role of a Deloitte Cybersecurity Analyst and investigate a simulated data-breach scenario at a client organization, using web-activity log data to determine the likely source and nature of the incident.

### 4.4 Project Objectives

- To understand the role and day-to-day responsibilities of a Cybersecurity Analyst at a professional services firm.
- To analyze a simulated web-activity log dataset and establish baseline user behaviour patterns.
- To identify suspicious IP addresses, user sessions, and request patterns within the log data.

- To determine whether a security incident originated from an internal source or an external attacker.
- To evaluate whether an external attacker could access the client's system without VPN access.
- To document investigative findings clearly and prepare a summary suitable for a non-technical client audience.
- To successfully complete all guided tasks and earn the Deloitte Cyber Job Simulation Certificate of Completion.

## 4.5 Scope of the Project

The scope of this job simulation covers the initial stages of a cybersecurity incident investigation — from reviewing raw log data and establishing normal behavioural baselines, to identifying anomalies, tracing the likely source of suspicious activity, and reporting findings. The simulation was limited to a virtual, self-paced learning environment provided by Forage and Deloitte, using a fictional client scenario, and did not involve investigation of any live organizational system.

## 4.6 Technologies and Tools Used

- Log Analysis: review and interpretation of web-activity/server log files
- Investigation Techniques: baseline behaviour analysis, anomaly and pattern identification
- Network Security Concepts: IP address analysis, session tracking, VPN-access evaluation
- Documentation Tools: structured written reporting of investigative findings
- Learning Platform: Forage virtual job simulation environment with guided video walkthroughs

## 4.7 Investigation Workflow

The general workflow followed during the simulation can be summarized in the following stages:

- Scenario Briefing: Understanding the client's reported incident and the objective of the investigation.
- Data Collection: Reviewing the provided web-activity log file containing IP addresses, user/session IDs, timestamps, and authentication status.
- Baseline Analysis: Establishing what normal user activity and authentication timing look like within the dataset.
- Anomaly Detection: Flagging sessions and IP addresses that deviate from the established baseline.
- Source Attribution: Determining whether flagged activity originated from within the organization's network or from an external source.
- Reporting: Summarizing findings and recommendations in a format suitable for the client.

## 4.8 Methodology

The job simulation followed a two-task, self-paced structure, summarized below:

| Task   | Title                  | Description                                                                                                                                                                                               |
|--------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Task 1 | Identify Cyber Threats | Reviewed a client's web-activity log file to establish baseline user behaviour, then identified suspicious IP addresses and session activity that deviated from that baseline.                            |
| Task 2 | Investigate the Breach | Traced the flagged activity to determine whether the suspicious behaviour originated internally or from an external attacker, and evaluated whether external access without VPN credentials was possible. |
| Final  | Findings Summary       | Documented the investigation outcome and recommendations in a clear write-up suitable for a client audience, completing the requirements for the Certificate of Completion.                               |

*Note: This was an unpaid, self-paced virtual job simulation with no stipend involved.*

Each task was supported by guided video instructions and example answers provided by Deloitte professionals, allowing conceptual understanding to be immediately reinforced through applied practice. On completion of both tasks, the certificate of completion was issued confirming successful demonstration of practical cybersecurity skills.

## 4.9 Expected Outcomes

- Ability to read and interpret raw web-activity/server log data to identify patterns of normal and abnormal behaviour.
- Practical understanding of how cybersecurity analysts distinguish internal activity from external attacker activity.
- Hands-on exposure to evaluating access-control questions, such as whether a system is reachable without VPN access.
- Improved ability to communicate technical investigative findings clearly to a client or non-technical audience.
- A completed Deloitte Cyber Job Simulation, evidenced by a verifiable Certificate of Completion issued by Deloitte via Forage.

## 4.10 Certificate of Completion and Communication Proof

The Certificate of Completion issued by Deloitte and Forage, confirming successful completion of practical tasks in Cyber Security, is attached in Chapter 3 of this report. The certificate is dated August 18th, 2026, and is signed by Tina McCreery, Chief Human Resources Officer, Deloitte. It carries an Enrolment Verification Code (6a84a2c1e0a44a9b24b3767a) and a User Verification Code (6a84a17c912fe6a8b876f2e7) that can be used to verify authenticity via the Forage platform.
