B.Tech – Computer Science & Engineering

ABOUT THE STUDENT

Candidate Profile

Roll Number

2410031096

Institute

IILM University, Greater Noida, U.P.

Programme

B.Tech CSE

Simulation Domain

Deloitte Cyber Job Simulation

Certificate Date

August 18, 2026

ABOUT THE PROGRAM

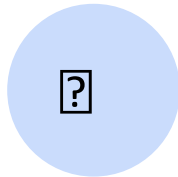

Deloitte & Forage

Deloitte is one of the world's largest professional services networks, with a Cyber practice that helps organizations anticipate, withstand, and recover from cyber incidents. Forage is a virtual work-experience platform that partners with companies like Deloitte to design self-paced job simulations, guided by pre-recorded videos and example answers from real professionals — letting students practise workplace tasks and earn a verifiable certificate.

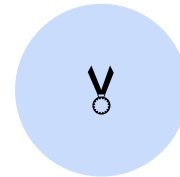

Global Firm

Deloitte's Cyber practice combines threat intelligence, forensics, and risk-advisory expertise.

Job Simulation

A self-paced, task-based virtual experience mirroring real Deloitte analyst work.

Verified Certificate

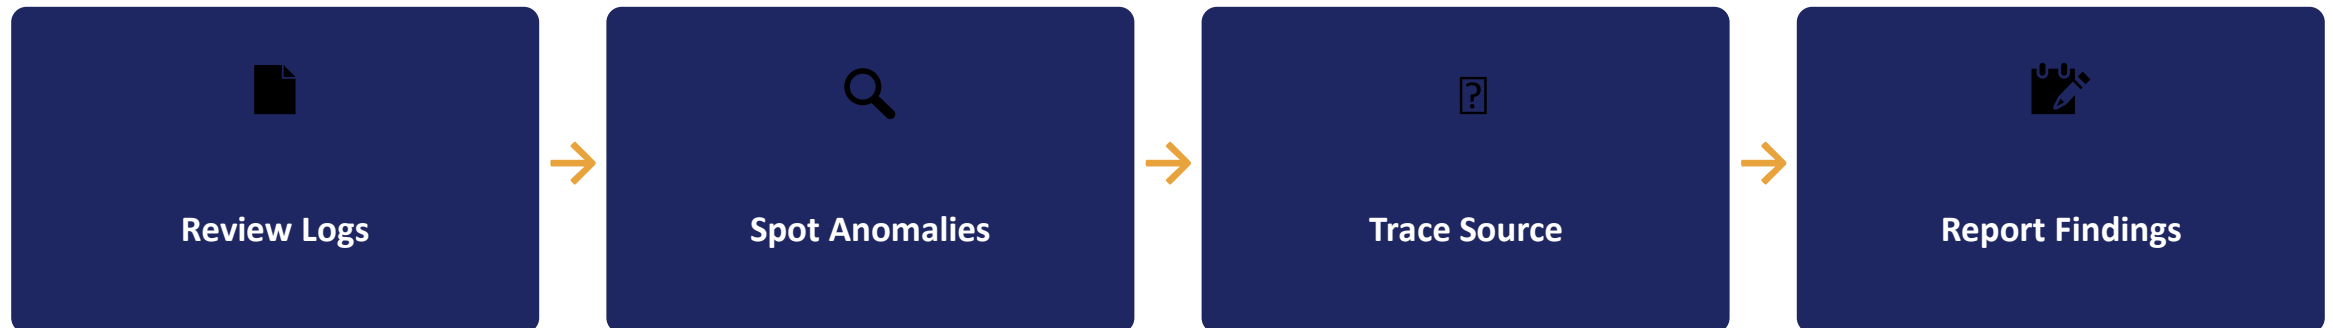

Completion is verified with unique enrolment and user verification codes.

PROBLEM STATEMENT

Bridging Theory and Applied Cybersecurity

Many engineering students learn network security and incident-response theory in coursework, but few get hands-on practice investigating a realistic breach the way a professional analyst would. This simulation addressed that gap by placing the learner directly into a Deloitte Cybersecurity Analyst role, investigating a simulated data breach using real-style web-activity log data.

This simulation walked through the investigation lifecycle:

What the Simulation Set Out to Achieve

Understand the Role

Grasp the day-to-day responsibilities of a Deloitte Cybersecurity Analyst.

Establish Baselines

Analyze web-activity logs to learn normal user behaviour patterns.

Spot Anomalies

Identify suspicious IP addresses, sessions, and request patterns.

Attribute the Source

Determine whether activity was internal or from an external attacker.

Evaluate Access

Assess whether external access was possible without VPN credentials.

Communicate Findings

Document conclusions clearly for a non-technical client audience.

The Toolkit Behind the Simulation

Log Analysis

Reviewing raw web-activity data

Baseline Modelling

Defining normal behaviour patterns

IP & Session Tracing

Investigating network identifiers

Access Evaluation

Assessing VPN / access-control gaps

Pattern Recognition

Spotting anomalies in the data

Client Reporting

Writing findings for stakeholders

Threat Attribution

Internal vs. external source analysis

Guided Learning

Forage video walkthroughs & examples

From Raw Logs to Client Findings

Data Layer

Client's web-activity log file — IPs, session IDs, timestamps, auth status

Baseline Layer

Normal authentication timing & behaviour patterns established

Detection Layer

Suspicious IPs and session anomalies flagged against baseline

Attribution Layer

Internal vs. external source determined; VPN-access question resolved

Reporting Layer

Findings and recommendations written up for the client

A Two-Task, Self-Paced Simulation

1

Identify Cyber Threats

Reviewed the client's web-activity log to establish a baseline of normal user behaviour, then flagged suspicious IP addresses and sessions that deviated from it.

2

Investigate the Breach

Traced flagged activity to determine whether it originated internally or from an external attacker, and evaluated whether external access was possible without a VPN.

✓

Findings Summary

Documented the investigation outcome and recommendations in a client-ready write-up, completing the requirements for certification.

Note: unpaid, self-paced virtual simulation — no stipend involved.

EXPECTED OUTCOMES

Skills & Capabilities Gained

- ✓ Ability to read and interpret raw web-activity/server log data
- ✓ Practical understanding of internal vs. external threat attribution
- ✓ Hands-on exposure to VPN and access-control evaluation
- ✓ Improved ability to communicate findings to a client audience
- ✓ A completed Deloitte Cyber Job Simulation with verifiable certification

CERTIFICATION

Successfully Completed
